1. Introduction

1.1. Scope of application

This specification applies to the active type TFT transmissive dot matrix LCD module that is supplied by **ZETTLER**. This LCD module should be designed for digital use.

LCD specification: Dots 720xRGBx1280

As to basic specification of the driver IC, refer to the IC (GC9702P) specification and datasheet.

1.2. TFT features

Structure: TFT PANNEL+IC+FPC+BL+TP

Transmissive Type LCD

720 dot-source and 1280 dot-gate outputs

5.0 inch TFT LCD 16.7M Color can be selected by software

White LED back light

MIPI interface

1.3. Applications

PSP

PDA

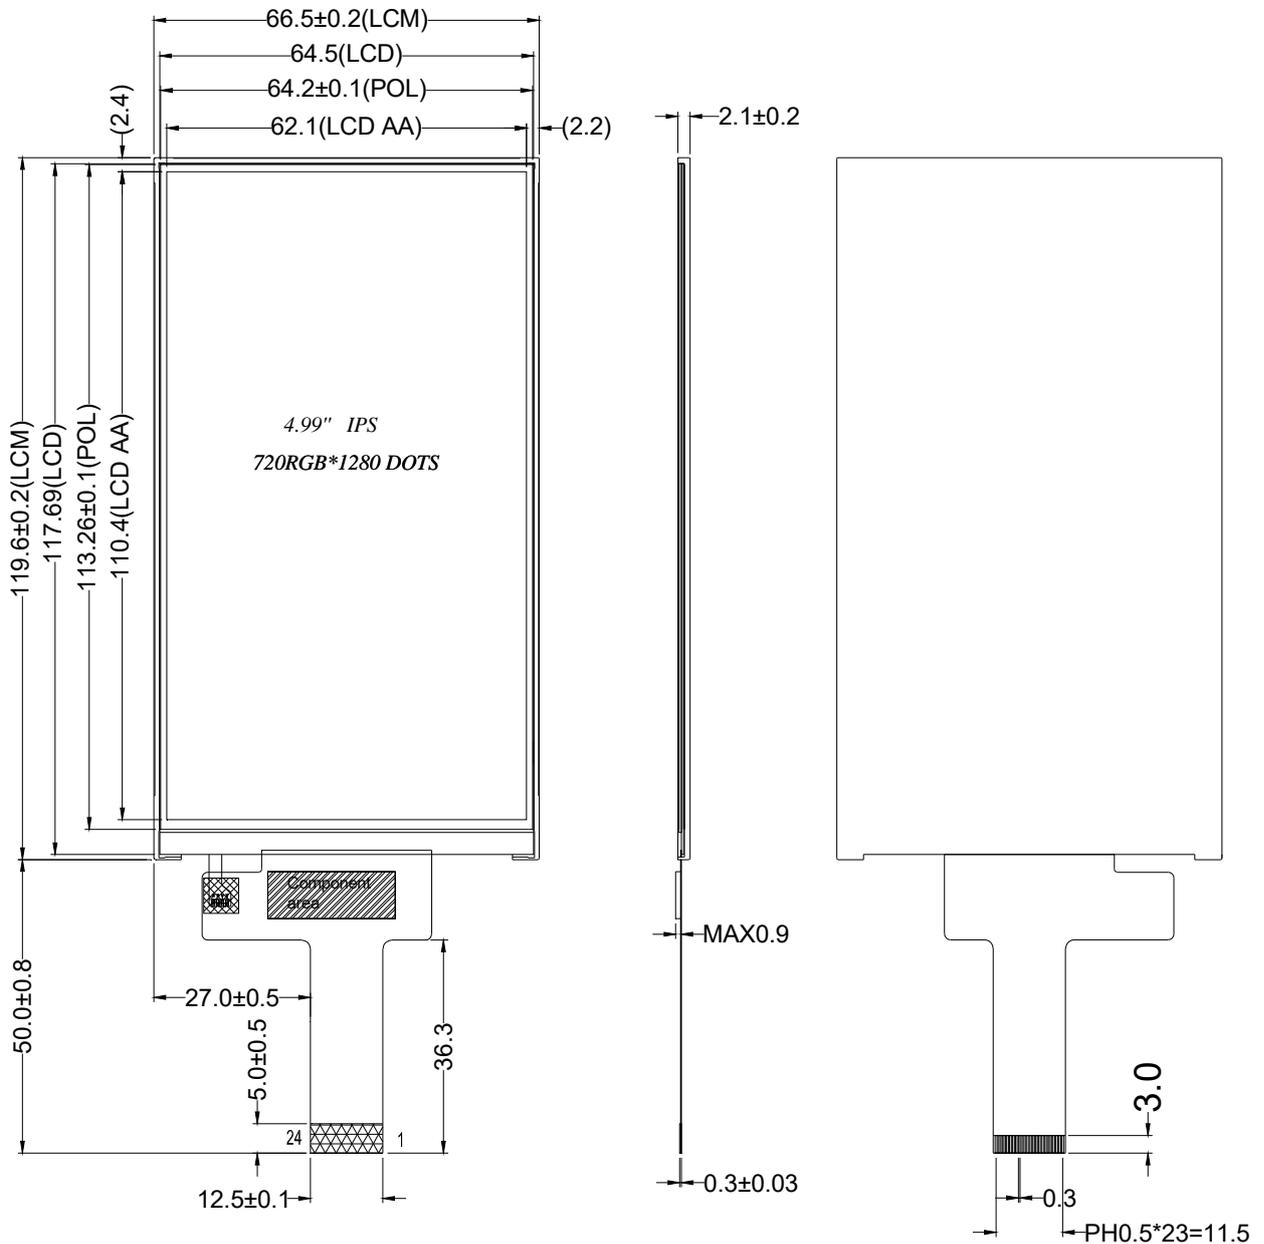

GPS

Etc...

9. LCM Quality Criteria

9.1. VISUAL & FUNCTION INSPECTION STANDARD

9.1.1 Inspection conditions

Inspection performed under the following conditions is recommended.

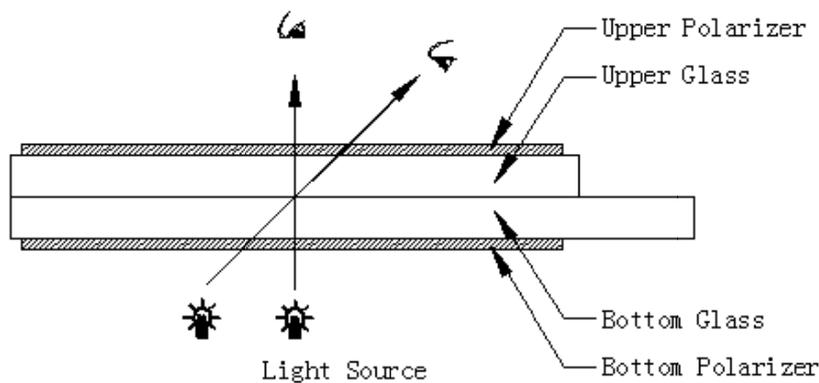

Temperature: $25 \pm 5^\circ\text{C}$

Humidity: $65\% \pm 10\% \text{RH}$

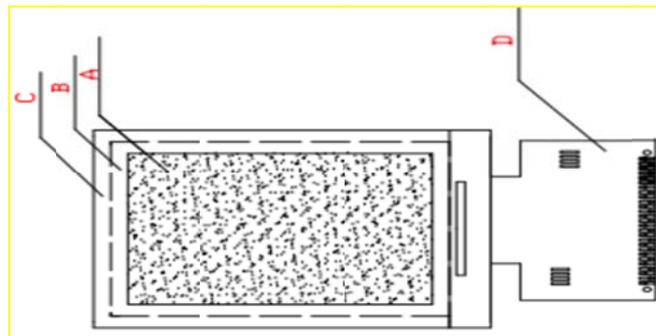

Viewing Angle: Normal viewing angle ($90^\circ \pm 45^\circ$);

Illumination: Single fluorescent lamp ($800 \sim 1200 \text{ LUX}$);

Viewing distance: 25-35cm, time: 5-10s;

9.1.2 Definition

Zone A: LCD AA

Zone B: Viewing Area

Zone C: Outside of the Viewing Area

Note:

As a general rule, visual defects in Zone C can be ignored when it doesn't effect product function or appearance after assembly by customer.

9.1.3 Sampling Plan

9.2. RELIABILITY TEST

ITEM	Condition	Sample size	Criterion
High Temp. Storage	80°C, 48 hrs	5pcs	Inspection after 2~4hours storage at room temperature, the sample shall be free from defects: 1.Air bubble in the LCD; 2.Sealleak; 3.Non-display; 4.Missing segments; 5. The surface shall be free from damage. 6. Contrast must be no more than 10% by the linearity tester. 7. Power must be no more than 10% by the linearity tester.

	2.Air discharge method±4KV,150pF/330Ω 10times (Can not face the role of IC)	5pcs	

9.3. Safety instructions

9.3.1 If the LCD panel breaks, be careful not to get any liquid crystal substance in your mouth.

9.3.2 If the liquid crystal substance touches your skin or clothes, please wash it off immediately by using soap and water.

9.4. Handling Precautions

9.4.1 Avoid static electricity damaging the LSI.

9.4.2 Do not remove the panel or frame from the module.

9.4.3 The polarizing plate of the display is very fragile. So, please handle it very carefully.

9.4.4 Do not wipe the polarizing plate with a dry cloth, as it may easily scratch the surface of the plate.

9.4.5 The color tone of display and background of LCM has the possibility to be changed in the storage temperature range.

9.4.6 Pay attention to the working environment, as the element may be destroyed by static electricity.

--Be sure to ground human body and electric appliance during work.

--Avoid working in a dry environment to minimize the generations of static electricity.

--Static electricity may be generated when the protective film is fast peeled off.

9.4.7 When soldering the terminal of LCM, make certain the AC power source of soldering iron does not leak.

9.4.8 If the display surface becomes contaminated, breathe on the surface and gently wipe it with a soft-dry-clean cloth. If it is heavily contaminated, moisten cloth with the following solvent (ex: Ethyl alcohol). Solvents other than those above-mentioned may damage the polarizer (Especially, do not use them. ex: Warter / Ketone)

9.5. Operation instructions

9.5.1 It is recommended to drive the LCD within the specified voltage limits, try to adjust the operating voltage for the optimal contrast, the color and contrast of LCD panel will varies at different temperature.

9.5.2 Response time is greatly delayed at low operating temperature range. However, this does not mean the LCD will be out of the order, It will recover when it returns to the specified temperature range.

9.5.3 If the display area is pushed hard during operation, the display will become abnormal.

9.5.4 Do not operate the LCD at the environments over the specified conditions, this may cause damage on the LCD and shorten the lifetime.

9.6. Storage instructions:

9.6.1 Store LCDs in a sealed polyethylene bag.

9.6.2 Store LCDs in a dark place, Do not expose to sunlight or fluorescent light. Keep the temperature between 20°C and 30°C.

9.6.3 Avoid the polarizer touch any other object, (It is recommended to store them in the container in which they were shipped.)

9.7. Limited Warranty

9.7.1 will replace or repair any of its LCD modules, which are found to be defective, when inspected in accordance with LCM acceptance standards (copies available upon request) for a period of 12 months from ink- print date on product

9.7.2 Any defects must be returned to within 60 days since ship-out. Confirmation of such date shall be based on freight documents. The warranty liability of wasam limited to repair and/or replacement on defects above (7.1,7.2)

9.7.3 No warranty can be granted if the precautions stated above have been disregarded. The typical samples are as below:

-- LCD glass crack/break

--PCB outlet is damaged or modified.

--PCB conductors damaged.

--Circuit modified with by grinding, engraving or painting varnish.

--FPC crack

9.7.4 Modules must be returned with sufficient description of the failures of defects. Any connectors or cable installed by the customer must be removed completely without damaging the PCB outlet, conductors and terminals. Modules must be packed with the container in which they were shipped.

9.8 Determination of surface smudges and dust spots:

9.8.1 The dirt and dust points that cannot be wiped shall be judged by the dot line standard. The dirt and dust points that can be wiped shall be regarded as good products

10. Packing method
